

I CLAIM:

1           1. A closure lid for a beverage drink container, said  
2 closure lid comprising:

3                 a top side, an underside, a slotted window cut through  
4 said top and underside inwardly from an edge surface thereof, a  
5 first pair of grooved tracks raised from said underside and  
6 spanning opposing sides of said window, a panel door at said  
7 underside fitted to slide within said grooved tracks for  
8 selectively opening and closing said window as desired, and a  
9 boss on said door protruding through said window for finger  
10 actuation in operatively sliding said door forward and back in  
11 allowing dispensing of beverage drink through said slotted  
12 window upon tilting the beverage drink container at an angle.

1           2. The closure lid of Claim 1, constructed of substantially  
2 different material composition than the beverage drink  
3 container.

1           3. The closure lid of Claim 1, constructed of substantially  
2 different material composition than the beverage drink  
3 container, and of dimension to snugly fit over a top lip of the  
4 beverage drink container.

1           4. The closure lid of Claim 3, constructed of a plastic  
2 composition.

1           5. The closure lid of Claim 1, wherein said panel door and  
2           said boss are of a 1-piece molded plastic composition.

1           6. The closure lid of Claim 1, wherein said first pair of  
2           grooved tracks are of a molded plastic composition.

1           7. The closure lid of Claim 1 for a hot beverage drink  
2           container including a second pair of grooved tracks raised at  
3           said underside, spanning said opposing sides of said slotted  
4           window and through which said door panel is fitted to slide,  
5           with said second pair of grooved tracks being co-linear with  
6           said first pair of grooved tracks and situated inwardly thereof  
7           along said underside.

1           8. The closure lid of Claim 7, wherein each of said first  
2           and second pairs of grooved tracks are of molded plastic  
3           composition.

1           9. The closure lid of Claim 1, further including a track  
2           raised inwardly of said first pair of grooved tracks at said  
3           underside, and at an angle with respect thereto to limit forward  
4           sliding movement of said panel door.

1           10. The closure lid of Claim 7, further including a track  
2           raised inwardly of said second pair of grooved tracks at said  
3           underside, and at an angle with respect thereto to limit forward

4 sliding movement of said panel door.

1 11. The closure lid of Claim 9, wherein said first pair of  
2 grooved tracks and said further included raised track are of  
3 molded plastic composition.

1 12. The closure lid of Claim 10, wherein said first and  
2 second pairs of grooved tracks and said further included raised  
3 track are of molded plastic composition.

1 13. A closure lid for a hot beverage drink container  
2 comprising:

3 a top side, an underside, a slotted window cut through  
4 said top and undersides inwardly from an edge surface thereof, a  
5 first pair of grooved tracks raised from said underside and  
6 spanning opposing sides of said window, a second pair of grooved  
7 tracks raised at said underside and spanning opposing sides of  
8 said window situated inwardly of said first pair of grooved  
9 tracks along said underside, a panel door at said underside  
10 fitted to glide within said first and second pairs of grooved  
11 tracks for selectively opening and closing said window as  
12 desired, a boss on said door protruding through said window for  
13 finger actuation in operatively sliding said door forward and  
14 back through said first and second pairs of grooved tracks in  
15 allowing dispensing of beverage drink through said slotted  
16 window upon tilting the beverage drink container at an angle.

1           14. The closure lid of Claim 13, constructed of  
2 substantially different material composition than the beverage  
3 drink container.

1           15. The closure lid of Claim 13, wherein said panel door,  
2 said first and second pairs of grooved tracks, and said boss are  
3 each of a molded plastic composition.

1           16. The closure lid of Claim 13, also including a track  
2 raised inwardly of said second pair of grooved tracks at said  
3 underside, and at an angle with respect thereto to limit forward  
4 sliding movement of said panel door.

1           17. The closure lid of Claim 16, wherein said first and  
2 second pairs of grooved tracks, said panel door, said boss and  
3 said raised track are each of molded plastic composition.

1           18. The closure lid of Claim 1, constructed of  
2 substantially the same material composition as the beverage  
3 drink container.

1           19. The closure lid of Claim 1, constructed of  
2 substantially the same material composition as the beverage  
3 drink container and of dimension to snugly fit over a top lid of  
4 the beverage drink container.
